

## **Mississippi Delta Community College Chooses SunGard Higher Education's Win Services for Faster Implementation of the Banner UDC**

Mississippi Delta Community College has chosen SunGard Higher Education for project management and consulting services to implement the Banner Unified Digital Campus (UDC) on an accelerated implementation schedule, helping to bring the benefits of online and personalized self-service applications to its students, faculty and staff as quickly as possible.

The College will implement the Banner UDC using SunGard Higher Education's Win Services, a set of services that are designed to implement the Banner UDC within a compressed timeframe and at a fixed price.

"The Win Services implementation model will help us deliver more and better services to our constituents much faster than a traditional implementation," said Larry G. Bailey, PhD, president, Mississippi Delta Community College. "We chose SunGard Higher Education to support us in this effort because of their high level of successful implementations at other community colleges and universities in Mississippi and across the nation."

The College's Banner UDC will include the entire integrated Banner UDC suite of student, finance, financial aid, human resource and advancement modules. The College will also implement the Banner Operational Data Store, an enterprise-wide operational and ad hoc reporting solution that is designed to provide a consistent view of institutional data and enables users to generate operational and ad hoc reports. The Luminis Platform will provide out-of-the-box integration with the Banner administrative system and one-stop online access to personalized information and services and enterprise communication applications.

"The Banner UDC will help staff throughout the entire MDCC system to work much more efficiently and accurately, while the self-service features available within the portal will help us deliver more effective and personalized interactions with all our constituents, helping to enhance the quality educational experience we provide at MDCC," said Dr. Bailey.
